ALPHA GUYASA

Full Stack Developer — Web Applications & Secure Backend Systems

Addis Ababa, Ethiopia · +251 975 567 560 · alphaguyasa@gmail.com · linkedin.com/in/alpha-guyasa-a2b567328 · github.com/Alphaguyasa

PROFESSIONAL SUMMARY

Computer Science graduate (CGPA 3.83/4.00) who ships full-stack applications and tests them like an attacker. Built a Dockerised web vulnerability scanner integrating OWASP ZAP, Nuclei, and Nikto behind a Next.js dashboard, a hybrid-retrieval RAG search engine over PDFs, and an offline Android mesh messenger with signed, encrypted packet routing. Penetration-testing intern at INSA, Ethiopia's national cybersecurity agency, and first place in Haramaya University's inaugural CTF. Seeking a full-stack or backend engineering role where security-aware development is valued.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, Kotlin, Dart, SQL, Bash
Frontend	React, Next.js (App Router), Tailwind CSS, Jetpack Compose, Flutter, Recharts
Backend	Node.js, Fastify, Express, REST API design, JWT authentication, streaming responses
Data	PostgreSQL, pgvector, MySQL, MongoDB, Room/SQLite, Supabase, schema design
Infrastructure	Docker, Docker Compose, Vercel, Git/GitHub, Linux, Postman, CI test harnesses
Security	OWASP Top 10, OWASP ZAP, Nuclei, Nikto, Burp Suite, Nmap, Wireshark, Ed25519 signing

PROJECTS

Website Vulnerability Scanner — Final Year Project · Next.js, Fastify, PostgreSQL, Docker 2026

- Built a full-stack scanning platform that orchestrates OWASP ZAP, Nuclei, and Nikto in Docker containers and surfaces findings through a JWT-authenticated dashboard with severity charts.
- Designed the seven-table PostgreSQL schema and REST API for scans, vulnerabilities, and reports; validated detection accuracy against OWASP Juice Shop and DVWA targets.

DocSearch — Cited question answering over PDFs · Next.js, TypeScript, Supabase pgvector 2026

- Engineered hybrid retrieval — vector similarity plus Postgres full-text, fused with Reciprocal Rank Fusion — streaming inline-cited answers that refuse when the corpus does not cover the question.
- Built a 91-question evaluation harness with paired bootstrap statistics and a Cohen's-kappa-0.80 validated judge; baseline recall@10 52.8%, MRR 43.4%, median latency 1.19s.

NullChat — Offline mesh messenger · Kotlin, Jetpack Compose, Room, Nearby Connections 2026

- Android app that delivers text and photos with no internet connection: Ed25519-signed packets, encrypted sessions, image fragmentation, and store-and-forward routing across nearby devices.

HU News — Flutter, Dart, WordPress REST API — published signed Android release 2025

- Led the home-feed module of a five-person team build: paginated API integration, cached images with three-tier fallback, real-time search, and persisted dark mode.

EXPERIENCE

Penetration Testing Intern · Information Network Security Administration (INSA), Addis Ababa 2025

- Executed authorized penetration tests on web applications and internal hosts, documenting each confirmed finding with reproduction steps, impact, and developer-ready remediation guidance.
- Manually validated scanner output to eliminate false positives, and rated findings against OWASP Top 10 and CVSS so owners could remediate by business risk.

Chairperson · Haramaya University Cyber Club 2025 – 2026

- Led the club's technical program — weekly hands-on labs in web exploitation, networking, and Linux — and organized the university's first CTF competition with INSA, placing first.

Campus Focal Person · Gheero (AI training-data collection) 2026

- Sole campus point of contact: onboarded student contributors on task specifications and quality standards, then reviewed submissions for accuracy before client delivery.

EDUCATION

BSc, Computer Science — Haramaya University, 2026

CGPA 3.83 / 4.00 · Coursework: Data Structures & Algorithms, Databases, Networks, Web Development.

AWARDS & LANGUAGES

1st Place — Haramaya University inaugural CTF, with INSA (2026).

Languages: Amharic (native), Afaan Oromo (native),

ALPHA GUYASA

Cybersecurity Analyst — Penetration Testing & Application Security

Addis Ababa, Ethiopia · +251 975 567 560 · alphaguyasa@gmail.com · linkedin.com/in/alpha-guyasa-a2b567328 · github.com/Alphaguyasa

PROFESSIONAL SUMMARY

Computer Science graduate (CGPA 3.83/4.00) with offensive-security experience from a penetration-testing internship at INSA, Ethiopia's national cybersecurity agency, and first place in Haramaya University's inaugural CTF. Built a Dockerised web vulnerability scanning platform integrating OWASP ZAP, Nuclei, and Nikto, and an end-to-end encrypted offline messenger using Ed25519 signatures and per-peer session ciphers. Writes the application code being tested, which makes findings reproducible and remediation advice practical. Seeking a penetration testing, application security, or SOC analyst role.

CORE COMPETENCIES

Offensive	Web application penetration testing, network scanning & enumeration, vulnerability assessment, manual exploitation, CTF
Tooling	OWASP ZAP, Nuclei, Nikto, Burp Suite, Nmap, Wireshark, Metasploit, DVWA & Juice Shop labs
Frameworks	OWASP Top 10, CVSS severity scoring, structured findings reports, remediation guidance
Applied crypto	Ed25519 signing, session encryption, key directories, fingerprint verification, replay protection
Engineering	JavaScript/TypeScript, Python, Kotlin, Bash, Node.js, Next.js, PostgreSQL, Docker, Linux, Git

EXPERIENCE

Penetration Testing Intern · Information Network Security Administration (INSA), Addis Ababa — 2025

- Conducted authorized penetration tests on web applications and internal network hosts under senior-analyst supervision, following a reconnaissance–enumeration–exploitation–reporting workflow.
- Documented every confirmed vulnerability with reproduction steps, evidence, impact, and specific remediation guidance developers could act on.
- Rated findings against OWASP Top 10 and CVSS, and manually validated scanner output to remove false positives so reviewer time went to real exposure.

Chairperson · Haramaya University Cyber Club — 2025 – 2026

- Founded and led the club's technical program: weekly hands-on labs in web exploitation, networking, and Linux, taking members from beginner level to CTF-ready.
- Organized the university's first CTF competition in partnership with INSA — challenge selection, infrastructure, and scoring — and placed first.

SECURITY PROJECTS

Website Vulnerability Scanner — Final Year Project · OWASP ZAP, Nuclei, Nikto, Docker, Next.js — 2026

- Built a scanning platform that orchestrates ZAP active/passive scans, Nuclei templates, and Nikto server checks in Docker containers, then normalises findings into a single triage dashboard.
- Modelled vulnerabilities, scans, and reports in PostgreSQL with JWT-authenticated access; benchmarked detection against OWASP Juice Shop and DVWA to tune scanner selection.

NullChat — Encrypted offline mesh messenger · Kotlin, Nearby Connections, Room — 2026

- Implemented the security layer of an internet-free Android messenger: Ed25519 packet signatures, per-peer session ciphers, a public-key directory, QR pairing, and word-based fingerprint verification.
- Designed the routing layer against abuse — seen-packet cache for replay and loop suppression, hop limits, duty-cycled radio use, and store-and-forward queues for offline peers.

DocSearch — Grounded PDF question answering · Next.js, TypeScript, pgvector — 2026

- Hybrid vector + keyword retrieval with inline citations and enforced refusal when the corpus lacks an answer; validated on a 91-question harness with a calibrated judge.

EDUCATION

BSc, Computer Science — Haramaya University, 2026

CGPA 3.83 / 4.00 · Coursework: Cryptography & Network Security, Networks, Operating Systems, Databases.

AWARDS & LANGUAGES

1st Place — Haramaya University inaugural CTF, with INSA (2026).
